

Integrity Packet Example (Filled)

This is a completed sample showing release-readiness documentation quality for a medium-consequence workflow.

1. Output Context

- Output ID: OPS-REL-2026-04-001
- Workflow Name: Weekly Customer Escalation Summary
- Date: 23-Apr-2026
- Author: Operations Analyst
- Consequence Tier (Low/Medium/High): Medium

2. Decision Intent

- Supports manager decision on priority incident follow-up and staffing.
- Intended audience: Service Operations Manager. Named approver: Director of Operations.
- In scope: incident categorization, trend summary, staffing recommendation. Out of scope: policy change approval.

3. Assumptions and Boundaries

- Assumption: ticket metadata in system is complete through prior business day.
- Known unknown: two incidents pending root-cause confirmation.
- Applicability limits: valid for service queue decisions only; not valid for compliance reporting.
- Boundary risk: if used for regulatory statements, unresolved root-cause statuses may misstate risk.

4. Evidence and Lineage

- Source list: Service Desk export, incident triage log, on-call staffing roster.

- Evidence references:
 - Claim: "Escalation volume up 18% week-over-week" → Service Desk export, filter **week=2026-W16**.
 - Claim: "Two categories drive 71% of escalations" → Incident triage log pivot table.
 - Recommendation: "Add one on-call analyst Friday PM" → roster coverage gap analysis.
- Missing evidence and mitigation: pending root-cause verification on two incidents; recommendation flagged as provisional.

5. Validation Check

- Validation method used: cross-check of AI summary against source exports and manual spot verification (10 sampled records).
- Validation depth matched to consequence tier (Yes/No): Yes
- Failure modes tested: hallucinated totals, incorrect category mapping, unsupported recommendation.
- Corrections made before release: corrected one category label mismatch and removed unsupported causal claim.

6. Release and Accountability

- Named approver: Director of Operations
- Release decision (Approve/Hold/Reject): Approve
- Approval rationale: evidence lineage complete, validation complete for medium tier, known unknowns explicitly bounded.
- Follow-up actions and owner: confirm pending root causes by 25-Apr-2026 (Incident Lead).
