

7-Day Quickstart Guide

This guide helps managers deploy a minimum control baseline in one week.

Day 1: Set the Rule

- Publish the Minimum Release Rule to the team.
- Confirm which workflows are medium or high consequence.

Day 2: Name Accountability

- Assign named approvers for medium and high-consequence workflows.
- Confirm who owns correction actions.

Day 3: Start Measurement

- Track baseline values for:
 - ☐ Validation pass rate
 - ☐ Correction load
 - ☐ Approval clarity
 - ☐ Escalation timeliness

Day 4: Use Integrity Packets

- Require an Integrity Packet on one active high-friction workflow.
- Check assumptions, boundaries, evidence, and validation fields.

Day 5: Run Weekly Review Script

- Run the five manager prompts.
- Select one intervention only.

Day 6: Correct and Retest

- Apply the selected intervention.
- Re-check one output sample for quality movement.

Day 7: Decide Next Scope

- Decide one action: expand, hold, or redesign.
- Record decision rationale and owner.

Exit Criteria

By end of week 1, you should have:

- one named approver map,
- one baseline indicator snapshot,
- one completed Integrity Packet sample,
- one intervention decision with owner and date.
